

Abstract of the Disclosure

A cargo support having a frame element (1) for mounting in the lower area (15) of a rear window (6) of a motor vehicle (2). The frame element (1) can be mounted to have a first mounting position framing the rear window (6) on the motor vehicle (2) and a second mounting position in which it is essentially horizontal for supporting cargo (20) on the vehicle. A second frame member (5) can be provided for co-acting with the window area frame element (1) for support cargo.
